

WHAT'S GOING ON?

RackPower Metered Power Strips

RackPower are proud to announce their newly developed Metered Power Distribution Units (PDUs). These units will not only provide convenient power distribution, but also monitor the aggregate power consumption of equipment that is connected. This feature will give the user an instant indication of current usage and overloading if present, whether steady or transient. It will also monitor any unexplained increase in consumption over time, which may indicate a fault in or misuse of connected equipment. RackPower Metered PDUs are available in two models; with meter, and with meter plus integrated circuit breaker.

Model Information

- All Models are designed for use at 230Vac.
- 3½ digit LCD display.
- Both our "Metered" and "Metered plus integrated circuit breaker" models are available over all our PDU range, from 10A to 32A total rating.
