# Extreme Labels

**NEW Improved  
Self-Laminating  
Cable Labels**

Designed to perform

Today, labels have to work harder than ever before.

Spending their lives on twisted cables, exposed to high temperatures or harsh cooling depending on their specific location within a site, traditional cable labels are frequently pushed to their limits of adhesion.

We listened to our customers and have worked hard with leading materials technologists to develop new, vastly improved cable labels, more suited to the demands of today. The results were stronger, clearer, thinner, shinier, stickier more flexible labels.

Laser-printable labels available in 6 colors plus white (red, blue, yellow, green, purple and orange). We feel our new self-laminating labels are now the best on the market.
